

EDUCATION

- **Sai Gon University**
Software Engineering

Ho Chi Minh City
Aug. 2020 – Jul. 2025

EXPERIENCES

- **ATOM SOLUTION**
Backend Developer

HCM, VN
May 2024 - Present

- **Digistore BVBANK**

Technologies: Python, Starlette, PostgreSQL, Celery, Redis, Kafka, Debezium, Trivy, Odoo

- **QR Pay:**

- * Generated EMV-compliant QR strings to support merchant QR-based payments.
- * Developed logic to identify merchants eligible for QR Pay services based on system registration and service configuration.
- * Developed a report feature to filter and display QR Pay transactions by bank region, enabling effective monitoring and financial reconciliation.

- **Fee Calculation:**

- * Implemented transaction fee logic for acquirer and issuer banks on POS payments.
- * Supported both domestic and foreign card types with configurable rules.

- **Real-time Data Synchronization:**

- * Integrated Debezium and Kafka to ensure real-time synchronization of merchant and store data across services.
- * Synchronized transaction data across services to enable verification and reconciliation by both the bank and merchants.

- **Dashboard:**

- * Developed reporting dashboards to visualize merchant revenue by day, month, and year, enabling both banks and merchants to monitor performance.
- * Built visual reports using database queries, allowing BVBANK branches to view sales data of the merchants they manage.
- * Developed a feature that allows merchants to view their real-time transaction and revenue data.
- * Implemented queries to support the bank head office in exporting detailed reports on merchant registration, subscribed services (e.g., QR Pay, POS), receiving accounts, and POS terminal details including serial numbers and associated fees.

- **Merchant Platform OCB**

Technologies: Python, Starlette, PostgreSQL, Celery, Redis, Kafka, Trivy, Odoo

- **Dashboard:**

- * Developed reporting dashboards to visualize merchant revenue by day, month, and year, enabling both the bank and merchants to monitor performance.
- * Built visual reports using database queries, allowing OCB branches to view sales data of the merchants they manage.
- * Implemented features for merchants to access real-time data on their transactions and revenue.

- **Transaction Management:**

- * Synchronized transaction data across services to allow merchants to view their transaction history in real time.
- * Implemented reporting exports to provide transaction insights for merchants and their corresponding bank branches.

- **Digistore SHB**

Technologies: Python, Starlette, PostgreSQL, Odoo, Celery, Redis, Kafka, Trivy, Odoo

- **Merchant Data Integration:**

- * Implemented a real-time transaction synchronization system between multiple services. After a successful transfer from users to POS devices, merchants registered in the system can verify whether transactions were completed successfully.
- * Developed a store synchronization feature that allows merchants to create stores via the merchant portal and automatically sync them with SHB's banking system, enabling the bank to efficiently manage each merchant's sub-stores.

- **Payment Processing:**

- * Managed the full payment flow from POS terminals through internal services to bank settlement, ensuring accurate and timely transaction processing.
- * Implemented QR code distribution to POS terminals and soundboxes, enabling retail customers and merchants to make payments via QR scanning.
- * Developed automated settlement and reconciliation processes, allowing merchants to efficiently monitor credited transactions within defined time intervals.

PROJECTS

- **Social Network Review Food:**

Backend:

- Runtime NodeJS with ExpressJS Framework.
- Database: MongoDB, Redis.
- Authentication: JWT Authentication.
- Real-time with Socket.IO.

Additional functionalities:

- Designed a MongoDB database schema.
- Google Authentication integration.
- Implemented CRUD functionality for posts with attached images and real-time commenting using Socket.IO.
- Implemented user and post search functionality with a unified search box for efficient navigation.
- Forgot password functionality, user reauthentication, and password reset. Used Redis technology to enable a one-time access link with a 15-minute expiration period.

PROGRAMMING SKILLS

- **Languages:** Python, TypeScript, C Sharp
- **Technologies:** Starlette Framework, Odoo, NodeJS (ExpressJS Framework), Kafka, Debezium, Celery Worker.
- **Database:** PostgreSQL, MySQL, SQL server.
- **NoSQL:** MongoDB, Redis.
- **Tools:** Github, Gitlab, Jira.
